In 2011, Rivers implemented upgrades that will save over \$500 annually on their energy bill. How did they do it?

Rivers - Estimated Savings as % of Total Annual Energy Expense

Rivers - Estimated Electricity kWh End-Use

In order to showcase its merchandise, Rivers Clothing Company has a very well lit store, resulting in a large electricity bill when inefficient lighting is used. As part of the Frisco Clean Tracks program, Rivers received a comprehensive energy audit from Xcel Energy, in addition to a full lighting audit and waste audit. Rivers found that lighting accounted for 85% of their energy bill.

Rivers upgraded 62 lights to more efficient T8 fluorescent bulbs and ballasts. Lighting quality will remain the same, but it will cost a lot less.

The Frisco Clean Tracks program paid for the cost of the audits and half of the cost of materials and supplies. Xcel Energy will pay for the other half of materials and supplies.

Estimated savings from lighting improvements: \$562, 6,025 kWh and five tons carbon emissions annually
